# Bridging Course for Python
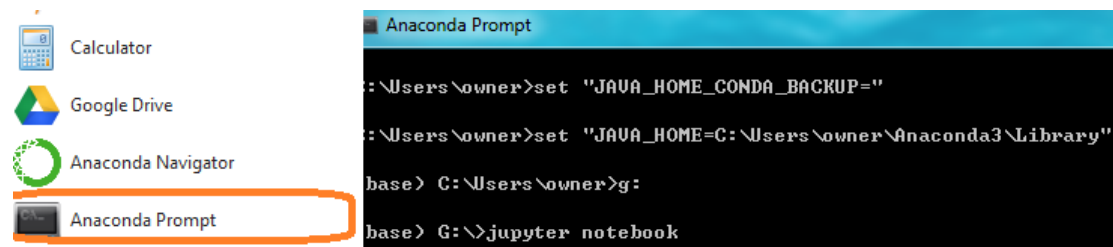

<u>Platform</u>: We shall use Anaconda and Jupyter throughout the bridging course. Anaconda comes with Jupyter Notebook, Python, numerous Python modules, and Anaconda Prompt.

All you need to do is to download Anaconda (Python 3.7) for your own system (top panel: Windows/ macOS) at the following link:

https://www.anaconda.com/distribution/#download-section

There are 2 ways to open Jupyter. One is to open **Anaconda Navigator** and select Jupyter. Another way (preferred) is to open **Anaconda Prompt** and enter "jupyter notebook". The extension of Jupyter is **ipyn**b.

A web browser connected to localhost will be opened. You can choose your project folder.
